Standard networking connectors for Ethernet connections. Rumor has it that only the “A” standard is accepted for government work and the “B” standard is being deprecated.

Power over Ethernet pinouts. More and more commonly used in VOIP phone systems, but can also be found in wireless access points and other things of that nature.

Ethernet crossover cables are useful for connecting to similar pieces of equipment together, e.g. [illegible] a [illegible] cable. Gigabit Ethernet uses all four pairs, thus a 1000 base-T crossover looks a little bit different.

Power Cable Wiring

UK 13A Kettle (c13/14) and Squareish (c19/20) type connectors are usually unlabelled and swapping the live and neutral can leave devices live when they are off so it is important to get it right.
