Standard networking connectors for Ethernet connections. Rumor has it that only the “A” standard is accepted for governing network and the “B” standard is being deprecated.

Power over Ethernet pinouts. More and more commonly used in VOIP phone systems, but can also

**Two pairs crossed, two pairs uncrossed
10BASE-T or 100BASE-TX crossover**

Ethernet crossover cables are useful for connecting two similar pieces of equipment together, such as a 1000 base-T crossover looks a little bit different. One of the main differences is that it uses all four pairs, not a

Gigabit T568A crossover

All four pairs crossed

10BASE-T, 100BASE-TX, 100BASE-T4 or 1000BASE-T crossover (shown as T568A)

Above (and left) colour-code order is applied to a RJ21 socket as shown below (and on the right)

The RJ21 mage is rotated for clarity of numbering.

RS-232 is still commonly used for data transfer in broadcast facilities; RS-485 is also used, however.

PS2 mouse and keyboard connectors, again, replaced by USB but still found on older motherboards. Swapping the five and ground square (19/20) type connectors are usually unlabelled and get it right.
