OSPF routing cost - quick overview

The ospf routing cost is part of what the OSPF network uses to choose between alternative routes — based on what's configured for the router. As the default value they use is rubbish because any router will have a different bandwidth, so the default value is rubbish.

Juniper configuration for OSPF

Juniper's default is slightly different to the default value they use, but it's still rubbish. The default value is rubbish because any router will have a different bandwidth, so the default value is rubbish. The default value is rubbish because any router will have a different bandwidth, so the default value is rubbish.

The table of costs we will set are shown below

Bits/sec	Routing Cost
1000000000	1
100000000	10
10000000	100
1000000	1000
100000	10000
10000	100000
1000	1000000
100	10000000
10	100000000
1	1000000000
