Local Area Code Dialling

Description

This feature allows users to dial local telephone numbers without having to dial the area code. This is based on your phone number sharing the same area code of the recipient that you intend to dial.

Function

With this feature a user can make calls quickly by avoiding the need to dial the 3-5 digit area code.

Configuration/Operation

No configuration is required to turn this feature on as it is a standard feature on all licences 'except' Digital Basic Phone Lines.
