## How to flush the DNS Cache

### Clear Chrome DNS Cache

Chrome has internal DNS Cache, separate to the operating system

```
# Browse to... chrome://net-internals/#dns and click 'Clear host cache'  
# Browse to... chrome://net-internals/#sockets and click 'Flush Socket Pools'
```

### Clear Dnsmasq DNS Cache

```
sudo killall -SIGHUP dnsmasq
```

### Clear Firefox DNS Cache

```
# Browse to... about:config and set network.dnsCacheExpiration to 0 and then back to the  
default (usually 60)
```

### Clear Windows DNS Cache

```
ipconfig /flushdns
```

## Clear PowerDNS Recursor DNS Cache

# A specific FQDN

```
rec_control wipe-cache <domain>
```

# A specific FQDN and anything under it i.e. \*.domain.com

```
rec_control wipe-cache <domain>$
```

# All records

```
rec_control wipe-cache $
```

## Clear BIND DNS Cache

```
rndc flush
```

## Mac 10.4

Open Terminal.

- Type:lookupd -flushcache
- Hit the return key and the process is complete.
- The Terminal window can be closed.

We would then ask you to check your network connection settings on your machine, ensuring the DNS server addresses are manually set, as this specifies exactly where your machine looks to resolve site names:

For IC.UK customers, these are available here :

It may also be worth trying an alternative web browser like Firefox, to negate any possible issues with your current browser, eg. Internet Explorer.

If you are still having trouble browsing websites or one particular site, open up your internet browser and surf to a website which is NOT the one you need to access. Close down the other tabs if you are using tabbed browsing. Now clear your internet browser cache - in Internet Explorer this is done through Tools->Internet Options then choose "Delete browsing history". Remove everything you can from here. In Firefox choose Tools->Clear Private Data.
